Why seasonal events cause fluctuations in employment and unemployment levels

by Kate Kahle, Research Analyst, Research and Analysis Bureau, Workforce Services Division, Montana Department of Labor and Industry

Seasonal events, such as weather changes, harvests, major holidays, and school openings and closings cause fluctuations in employment and unemployment levels.

Seasonal events related to employment and unemployment levels are those that tend to occur at the same time each year:

- Christmas is a seasonal event that occurs at the same time each year. It affects employment levels significantly, mainly in the retail trade industry.
- St. Patrick's Day is also a seasonal event that occurs at the same time each year. It affects employment levels to some degree, mainly in the eating and drinking places industries.
- IRS tax deadlines are seasonal events that happen at approximately the same time each year. They significantly affect employment in the income tax service industry.
- School opening days in Montana usually occur around the same time each year. Employment in the local government, transportation, services and trade industries are significantly affected.

In contrast, there are events that are seasonal but can't be predicted to occur at the same time each year:

- A presidential election is a *cyclical* event rather than a seasonal event. It affects employment significantly, but only every four years. It affects all industries.
- Hurricanes are seasonal events, but occur at unpredictable times. They affect employment significantly in all industries.
- Easter is a holiday that doesn't have a set date each year. This holiday doesn't affect employment to a great degree. Most affected employment is in the trade industry.

(continued on next page)

 Auto model year changeovers used to occur at the same time each year, but schedules for yearly changeovers have changed and are no longer at a set time each year.

Seasonality, which may account for as much as 95 percent of month-to-month unemployment change, obscures nonseasonal trends and cyclical movements.

Since seasonal fluctuations follow fairly regular annual patterns, their influence can be eliminated from data series through seasonal adjustment.

A data series, such as employment or unemployment, that is affected by seasonal events is said to exhibit seasonality. Graphing unadjusted data can reveal seasonal patterns.

Other disruptions in a seasonal pattern that might be noticeable when looking at unadjusted data may signal irregular events, such as Montana's employment decrease due to rising energy costs in 2001, or disruptions in employment due to the wildfires of 2000.

Seasonal patterns vary in four fundamental ways:

• A seasonal pattern often varies from state to state. *See ILLUSTRATION 1*.

2 A seasonal pattern in a given state often varies from industry to industry. *See ILLUSTRATION 2*.

MONTANA

EMPLOYMENT AND LABOR FORCE TRENDS

Editor: Julie Huntington

800 copies of this public document were printed at an estimated cost of \$1.25 per copy, for a total cost of \$1,000.00.

3 Seasonal effects can vary from year to year in the same series. *See ILLUSTRATION 3*.

- **4** The size of seasonal movements is often related to the level of employment or unemployment.
 - A series has additive seasonality if the same size swings seem to occur every year regardless of any change in the level of the series. See ILLUSTRATION 4A.

 A series exhibits a multiplicative form of seasonality if seasonal swings get bigger or smaller as employment or unemployment levels rise or fall. See ILLUS-TRATION 4B.

Seasonal adjustment is a statistical process that removes seasonal effects so underlying trends can be observed.

Seasonal adjustment *adds* jobs to an unadjusted series in months with low seasonal employment. It *subtracts* jobs from an unadjusted series in months with high seasonal employment.

After being seasonally adjusted, resulting series will have less month-to-month variability than unadjusted series. *See ILLUSTRATION 5*.

Seasonal adjustment involves using past data to approximate seasonal patterns. Adjusted series are useful in analyzing nonseasonal economic and social trends, and are a better reflection of economic performance than changes in unadjusted data.

Seasonal adjustment is important because:

- Without seasonal adjustment, month-to-month comparisons of data are often misleading. As a consequence, it is difficult to produce effective and meaningful analysis over time without the availability of a seasonally adjusted series.
- Seasonally adjusted data is used extensively to make economic decisions. Without seasonally adjusted series, analysts, policy makers and other data users would find it harder to make adequate assessments of economic health, and they would not be able to accurately follow trends in state labor markets. ■

Economic highlights and employment outlook

Civilian labor force

Montana's civilian labor force averaged 474,700 the second quarter of 2002—up 6,300 over the quarter, and up 5,600 over the year.

Employed

The number of Montanans employed during the quarter averaged 455,000—up 12,200 over the quarter, and up 6,200 over the year.

Quarterly Employment Trends

		MONTANA	<u>.</u>		UNITED STATES
	Montana Civilian	Montanans	Montanans	Unemployment	Unemployment
Quarter	Labor Force*	Employed	Unemployed	Rate (Montana)	Rate (U.S.)
2002 - 2nd	474,700	455,000	19,700	4.2%	5.8%
2002 - 1st	468,400	442,800	25,600	5.5%	6.2%
2001 - 4th	458,400	437,400	21,000	4.6%	5.2%
2001 - 3rd	468,600	450,800	17,800	3.8%	4.8%
2001 - 2nd	469,100	448,800	20,300	4.3%	4.4%

*Rounded Civilian Labor Force Numbers, 2002 Benchmark (Not Seasonally Adjusted)

Unemployed

The number of Montanans unemployed during the quarter averaged 19,700—down 5,900 over the quarter, and down 600 over the year.

The average unemployment rate for the quarter was 4.2 percent—down 1.3 percentage points over the quarter, and down one-tenth of a percentage point over the year.

Wage and salary jobs by industry sectors

(NOTE: Numbers may not total due to rounding.)

Total nonagricultural wage and salary employment in Montana averaged 397,200 jobs for the second quarter of 2002—up about 12,200 jobs over the quarter, and up approximately 2,200 jobs over the year.

Mining averaged 5,500 jobs—up about 300 jobs over the quarter, but even over the year.

Construction averaged 20,900 jobs—up approximately 3,600 jobs over the quarter, and down about 200 jobs over the year.

Manufacturing averaged 23,100 jobs—even over the quarter, and down about 300 jobs over the year.

Transportation, communications and utilities (TCU) averaged 21,900 jobs—up about 400 jobs over the quarter, but down about 200 jobs over the year.

Trade averaged 102,600 jobs—up about 3,300 jobs over the quarter, but down about 200 jobs over the year. All but about 100 jobs of the quarterly gain were in retail trade.

Finance, insurance and real estate (FIRE) averaged 18,300 jobs for the quarter—nearly even over the quarter, and up about 500 jobs over the year, largely in commercial banks.

Services averaged 118,700 jobs—up about 3,400 over the quarter, and up about 2,100 over the year. The largest over-the-year increases came in health services and engineering and management services.

Total government averaged 86,200 jobs—up approximately 1,100 jobs over the quarter, and up about 500 jobs over the year.

Average weekly hours and earnings

Average weekly earnings for production workers averaged \$403.38 for the second quarter of 2002—up \$10.62 over the quarter, and up \$9.64 over the year.

Average weekly hours averaged 32.4—up seven-tenths of an hour over the quarter, and up one-tenth of an hour over the year.

Average hourly earnings averaged \$12.45 for the quarter—up 6 cents over the quarter, and up 26 cents over the year. ■

Industry news from around the state

(Gathered primarily from state newspaper reports)

Agriculture

The Western Sugar Co. has been purchased by the Rocky Mountain Sugar Growers Cooperative. The grower-owned company is now called Western Sugar Cooperative.

The Columbia Grain wheat operation in Chinook has merged with the new shuttle-loading facility in Harlem. Columbia Grain's office has moved to Harlem; its pea and lentil processing plant will stay in Chinook.

Mining

Ownership of the Otter Creek coal tracts in southeastern Montana has been transferred to the state of Montana from the U.S. Bureau of Land Management.

Nevoro Gold Corp. has purchased Apollo Gold and announced plans to expand the Montana Tunnels gold mine south of Helena, possibly extending the life of the mine another 15 years.

Construction

Corixa Corp. has announced plans for a \$40 million expansion of its facility in Hamilton that could translate to as many as 150 new biotech jobs.

The University of Montana plans to build a 216-unit student housing complex south of Dornblaser Field in Missoula. The \$18.9 million project is expected to be completed by August 2004.

Albertson's is replacing two of its grocery stores and remodeling a third store in Billings at a cost of approximately \$15 million.

Figgins Sand & Gravel Inc. of Belgrade has been acquired by MDU Resources Group of Bismarck, N.D.

Manufacturing

Video Lottery Consultants'

Bozeman manufacturing operation is being moved to Reno, Nev., where the headquarters of VLC parent company International Game Technology is located. Thirty-two workers are affected, some of whom have been offered jobs in Reno. A spokesperson for VLC says the company has been concentrating more on video lottery game development and systems management in recent years than on manufacturing.

MR3 Systems has abruptly pulled out of Butte. The company produced liquid zinc sulfate out of waste from zinc plants.

Community Bio-Resources has changed its name to BioLife Plasma Services. The company collects plasma at about 80 centers around the nation—including centers in Billings and Missoula—and ships it to processing plants in California, Michigan and Austria where plasma is processed and components are used to manufacture medications.

A family business based in Belgrade is manufacturing an environmentally-safe portable toilet of its own design. Phillips Environmental Products' Portable Environmental Toilet (PETT) weighs only seven points and can be folded up and carried like a suitcase. A mesh bag suspended under the molded plastic toilet seat is lined with a biodegradable garbage bag containing a powdered mixture that turns liquids into a semi-solid odorless gel. A used bag is then enclosed in a biodegradable ziplock bag and thrown in the garbage.

Transportation, Communications & Utilities

The 3 Rivers Telephone Cooperative is building a \$5 million telephone plant in Shelby to bring 3 Rivers telephone and Internet service to the Shelby area. A spokesperson says the project should be completed by October or November.

Laurel-based Fibervision cable company, which serves about 1,600 customers in Missoula, is being sold to Nebraska-based USA Companies.

The company that acquired Montana Power Company's oil and gas business is closing its Butte office. A spokesperson for EnCana (a combined company of Pan Canadian and Alberta Energy) says the 55 workers at the Butte PanCanadian office have been offered other positions within the company or severance packages. Most employees choosing to stay with PanCanadian will relocate to Denver.

Trade

Smith's Food and Drug Centers Inc. has announced the closure of its store in Butte. Forty-seven employees are affected by the decision.

Thurman Industries has decided to close its electronics, plumbing and garden supply store in Bozeman.

Twelve workers are affected.

The Mustard Seed is opening an Asian-cuisine restaurant in Billings. The corporation already has restaurants in Missoula and Spokane.

Services

North Valley Hospital's Extended Care Center in Whitefish is closing. About 50 residents and 45 employees are affected.

The Sacajawea Hotel in Three Forks has been acquired by a partnership of owners and reopened as a restaurant and inn.

Missoula's Crystal Theater has closed after a 30-year run as an independent and foreign film showplace.

Bozeman-based ILX Lightwave laid off 21 more employees in May. The company manufactures equipment for companies that produce fiber-optic components.

Government

The Montana Air National Guard has announced plans to build an \$11 million practice bombing range just west of the Fort Belknap Reservation. A guard spokesperson says storage buildings and an air traffic control tower should be completed and bombing exercises begun by 2004. ■

Information used in these industry briefs was gathered primarily from state newspaper reports.

^{*} A single-county Metropolitan Statistical Area (MSA) is determined by the U.S. Office of Budget and Program Planning and must have a central city with a population of 50,000 or more. Single-county MSAs are named after their central cities. Billings and Missoula MSA employment is produced by the Montana Department of Labor and Industry for use as a state economic indicator.

THE CONSUMER PRICE INDEX (CPI) IS A MEASURE OF THE AVERAGE CHANGE IN THE PRICES PAID BY URBAN CONSUMERS FOR A FIXED MARKET BASKET OF GOODS AND SERVICES. THE CPI IS CALCULATED MONTHLY FOR TWO POPULATION GROUPS, ONE CONSISTING ONLY OF THE URBAN HOUSEHOLDS WHOSE PRIMARY SOURCE OF INCOME IS DERIVED FROM THE EMPLOYMENT OF WAGE EARNERS AND CLERICAL WORKERS (CPI-W). AS NEW USES WERE DEVELOPED FOR THE CPI IN RECENT YEARS, THE NEED FOR A BROADER AND MORE REPRESENTATIVE INDEX BECAME APPARENT. THE ALL-URBAN CONSUMER INDEX (CPI-U), INTRODUCED IN 1978, IS REPRESENTATIVE OF THE 1982-84 BUYING HABITS OF ABOUT 80% OF THE NONINSTITUTIONAL POPULATION, COMPARED WITH 32% REPRESENTED IN CPI-W.

SOURCE FOR DATA: SEE TECHNICAL NOTE S-6 ON "SOURCES OF DATA" PAGE AT BACK OF THIS PUBLICATION.

Note: The Bureau of Labor Statistics has begun using a new formula for calculating the basic components of the CPI-U and the CPI-W effective with the data starting January 1999.

Glossary of terms

- 1. Civilian Labor Force the number of persons 16 years and older, defined as employed or unemployed, excluding members of the armed forces.
- 2. Employed those persons who work for pay or profit during a week or, as unpaid family workers, work 15 hours or more during a week. Also included as employed are those who, although not working, had some job attachment and were not looking for work, including persons temporarily absent from a job due to illness, bad weather, vacation, or labor dispute, whether or not they were in a pay status during their time off.
- 3.<u>Unemployed</u> those persons who, for an entire week, did not work at all, were able to work and available for work, and (1) were looking for work or (2) would have looked for work except that (a) they were waiting to return to a job from which they had been laid off, or (b) they were waiting to report to a new wage and salary job scheduled to start within the following 30 days (and were not in school during the week).
- 4. <u>Unemployment Rate</u> the number of unemployed expressed as a percent of the civilian labor force.
- 5. Residence Data a count of people by where people live.
- 6. Establishment Data a count of jobs by where people work.
- 7. Seasonally Adjusted Labor Force Series to facilitate the evaluation of the labor force, recurrent yearly movements have been isolated and removed using the X-12 ARIMA method of seasonal adjustment. This is the same method used by the Bureau of Labor Statistics to seasonally adjust the national labor force series.
- 8.<u>MSA</u> Metropolitan Statistical Area as determined by the Office of Management and Budget. The MSA must have a central city with a population of 50,000 or more.
- 9.<u>LFA</u> Labor Force Area as determined by the Research and Analysis Bureau, Montana Department of Labor and Industry, consists of a central city or cities with a population of less than 50,000 and the economically integrated geographical area surrounding it.
- 10.<u>LWIA</u> The enactment of the Workforce Investment Act (WIA) of 1998 is the first wholesale reform of the nation's job training system in more than 15 years. Montana's State Workforce Investment Board was created by the Governor in response to this Act and its first task was to certify the local workforce investment areas (LWIA), which are guided by local workforce investment boards (these local boards replaced JTPA's Private Industry Councils). The 2 LWIAs for Montana are known as Rural Concentrated Employment Program, or CEP (Beaverhead, Broadwater, Deer Lodge, Granite, Jefferson, Lewis & Clark, Madison, Meagher, Powell, and Silver Bow counties), and Balance of State (the other 46 counties).
- 11.<u>BENCHMARKING</u> is a continuous process of establishing a new set of data which affects the series of estimates through revisions. Once a new benchmark is established, the adjustments to estimates between the new benchmark and the preceding one are carried forward progressively to the current month by use of sample trends. The benchmark is established less frequently (usually once a year) based on sample or secondary data. In the case of employment data, the benchmark is used to establish the level of employment, while the sample is primarily used to measure the month to month changes in the level.
- 12. CES-790 Program urrent employment statistics survey produces monthly estimates of a wide variety of employment and earnings information for the nation and each state. Because this information comes from a survey of employers, persons who work for 2 different companies would be counted twice. Thus, nonagricultural employment is actually a count of the number of jobs filled, rather than the number of persons employed.

Sources of data

- S-1.) Prepared by the Montana Department of Labor and Industry's Research and Analysis Bureau in cooperation with the U.S. Department of Labor's Bureau of Labor Statistics (BLS). LAUS data (Local Area Unemployment Statistics program) is adjusted to the Current Population Survey benchmark and is the official BLS approved series that is used to allocate federal funds and determine eligibility for federal assistance programs. This series represents employment and unemployment by place of residence, and is not comparable to the place-of-work industry employment series (CES data). LAUS data is calculated for the week that includes the 12th of the month. Workers involved in labor disputes are counted as employed. Total employment in the labor force also includes agricultural workers, unpaid family workers, domestic workers and the self-employed.
- S-2.) Prepared by the Montana Department of Labor and Industry's Research and Analysis Bureau. The unadjusted unemployment rate is prepared by the LAUS program in cooperation with the U.S. Department of Labor's Bureau of Labor Statistics. The seasonally adjusted rate is an unofficial series, and is provided only for use as a state economic indicator.
- S-3.) Prepared by the Montana Department of Labor and Industry's Research and Analysis Bureau from LAUS data. Data for Service Delivery Areas and Labor Force Areas is calculated from the official data series by summing up employment and unemployment for the appropriate counties involved, and calculating an unemployment rate from the summed data for each area.
- S-4.) Prepared by the Montana Department of Labor and Industry's Research and Analysis Bureau in cooperation with the U.S. Department of Labor's Bureau of Labor Statistics. Data from the CES (Current Employment Statistics) program represents nonagricultural wage and salary employment by place of work, and covers full-time and part-time employees who worked during, or received pay for, the payroll period that includes the 12th of the month. The data excludes the self-employed, volunteers, unpaid family workers and domestic workers. Persons on sick leave, vacations, or holidays (and being paid for that period by their employer) are considered employed. Payroll and worker hour data is collected for production and related workers in manufacturing industries, nonsupervisory workers in private service-producing industries, and construction workers in construction industries. The earnings figures are "gross" figures—that is, they reflect changes in wage rates, shift differentials and premium pay for overtime work. The hours figures relate to the hours for which pay was received, which is different from scheduled or standard work hours.
- S-5.) Prepared by the Montana Department of Labor and Industry's Research and Analysis Bureau from a survey of Business Establishments as part of the BLS-790 Program. Information on female employment is computed as a ratio of all employees of the Current Employment Statistics, and is produced for informational purposes only.
- S-6.) Tabulations produced by the U.S. Department of Labor's Bureau of Labor Statistics, and reprinted by the Montana Department of Labor and Industry's Research and Analysis Bureau for informational purposes only. This is a national data series because Montana data is not computed separately.

Percent of Montanans in Poverty by County - 1999 Montana Average: 14.6% U.S. Average: 12.4%

Individuals: 14.6% By AGE Under 18: 18.4%

Under 18: 18.4% 18 and older: 13.1% 65 and older: 9.1% Poverty is measured by using 48 income thresholds that vary by household size and age of the householder. A household can be a family household, a single person household, or a nonfamily household that includes unrelated single persons. To determine whether a person is poor, the total income of a person's household is compared with the threshold appropriate for that household. If a total household income is less than the threshold, then every member of that household is considered poor. Poverty statistics do not include institutionalized people, people in military group quarters, people living in college dormitories, and unrelated individuals under 15 years old.
